Therapy management of adults with incomplete spinal cord injury

The course aims to give an overview of the therapy principles that contribute to the interdisciplinary management of the adult individual with incomplete SCI. This course is aimed at Physiotherapists and Occupational therapists who work with persons with incomplete Spinal cord injury.

The course will cover anatomy and physiology of incomplete spinal cord injury, gait, UL management and therapeutic treatment options. The course will also give an overview of the multi disciplinary input to the person with an incomplete spinal cord injury.

There will be a practical element to this course as well as case studies and the opportunity for group discussions.

Course level: Band 6/7, however experienced Band 5 therapists will also benefit.

Friday 15 May – Saturday 16 May 2020

Places restricted to 15: early booking recommended.

£250
