“The service offered went way beyond expectations – care and understanding of the highest level”

“I had confidence that any worries/problems would be followed up”

Clients and families rated service satisfaction as 98 %

Referral to the Service

You can be referred to the service by your GP, Consultant or other professionals involved in your care

How can I help reduce healthcare associated infections?
Infection control is important to the well-being of our patients and for that reason we have infection control procedures in place. Keeping your hands clean is an effective way of preventing the spread of infections. We ask that you, and anyone accompanying you use the hand sanitiser available at the entrance to every clinical area before coming in to and after leaving the clinical area. In some situations hands may need to be washed at the sink using soap and water rather than using the hand sanitiser. Staff will let you know if this is the case.

- Discharge
- Advice & Self Management
- Discharge

Rehabilitation Programmes

We work with you to identify your priorities and goals. Then we set action plans to achieve your goal. We work with you in the most appropriate setting be that clinical, at home, your workplace or in the community.

Goals our clients have achieved

- I will be able to return to weekly swimming trips with my friend
- I will be able to go out with friends one evening a week, reporting improved energy levels
- I will be able to run and catch a bus
- I will be able to walk with improved confidence in confined spaces
- I will return to work part time
- I will participate in my activities with less anxiety
- I will talk more with my family to reduce the stress we experience.
