How can I help reduce healthcare associated infections?

Infection control is important to the well-being of our patients and for that reason we have infection control procedures in place. Keeping your hands clean is an effective way of preventing the spread of infections. We ask that you, and anyone visiting you, use the hand rub (special gel) available at the main entrance of the hospital and at the entrance to every ward before coming in to and after leaving the ward or hospital. In some situations hands may need to be washed at the sink using soap and water rather than using the hand rub. Staff will let you know if this is the case.
